

Analysis Of Music

To succeed in music, you'll need to understand what's meant by these ideas:

- Rhythm
- Melody
- Harmony
- Dynamics
- Tone
- Form
- Texture

To demonstrate this at a basic level, you need to be capable of identifying how these ideas are used in a piece of music.

So...

- 1.** Do some research to discover what the above seven words mean in music.
- 2.** Choose any conventional piece of music.
- 3.** Listen to the music you've chosen, and **identify in detail exactly how** each of the above ideas is used. Diagrams of any sort will be useful for doing this.
- 4.** Present your work in any manner that that is suited to your style, but it must clearly show that you've adequately completed the requirements of this task.
- 5.** Do this before **[Date TBA]**.
- 6.** Assessment will be based on the level of detail included, the clarity with which this detail is communicated, and the extent to which you demonstrate an understanding of what you've done.
